Representative meeting at Elastocon

Every third year we invite our representatives to Elastocon. In mid-September we organized a three day meeting with 17 participants from companies representing Elastocon in 16 different countries.

During these three days, participants received intensive training in Elastocon's own rubber and plastic testing instruments, including hands-on demonstrations in our laboratory, so

that our representatives can assist our customers even better.

In addition to the education, we could also show our guests some attractions in Borås with surroundings. For example, we took a guided tour at the Borås Textile Museum, one of the Nordic region's leading textile museums, and an obvious part of the Textile Fashion Center in Borås.

Elastocon manufactures instruments for testing of rubber and plastic materials

- Specimen preparation
- Ageing ovens
- Stress relaxation and creep
- Low temperature testing
- Windscreen fogging
- Computerised testing
- Electrical tests
- Custom built instruments
- Calibration service

Pictures from our representative meeting at Elastocon September 11–13th 2018

Andréas Svensson, who works with Construction and Support at Elastocon, demonstrates the Elastocon TR Tester, ET 01-II, for a group of representatives. The ET 01-II TR Tester is used for determination of low temperature characteristics by the temperature retraction procedure according to ISO 2921 and ASTM D1329.

A group of representatives is instructed by Anna Anderzén in the Elastocon Stress Relaxation Test System.

One of the evenings we had a guided tour at the Borås Textile Museum, one of the Nordic region's leading textile museums, and found out more about the history of textile machines.

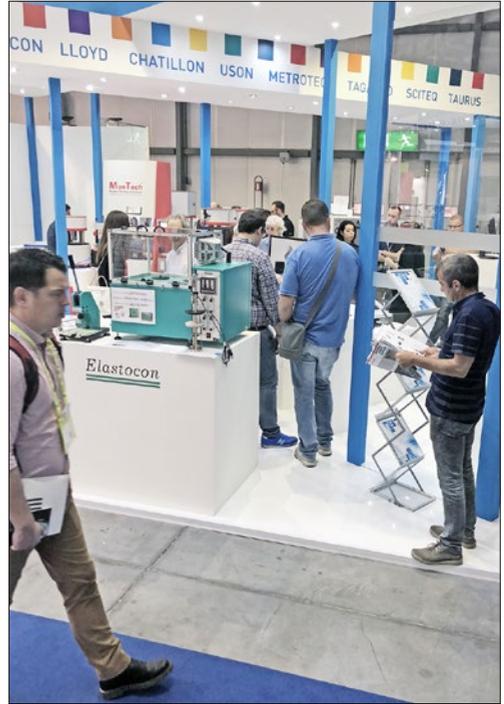

PLAST 2018 in Milan

In end of May, beginning of June Plast2018 in Milan took place. It is an exhibition for plastic and rubber that is presented every third year.

This exhibition is a nice meeting place where I had the opportunity to meet both existing and new customers as well as some of our representatives that work with us.

I was present in our Italian distributors stand, company DGTS, together with several other manufacturers' representatives whom DGTS represent in Italy. All of us working in this stand were very impressed and appreciated the excellent service and logistic that DGTS provided and that made our work during the exhibition so much easier.

Two installations of our Stress relaxation test system in USA

In June I had two different installations of our stress relaxation system in USA.

The first customer was located outside of Denver, Colorado and as seen in the picture, we can also have some fun while learning.

The second customer was located outside of Detroit, Michigan.

Both installations went fine and I believe that both customers will have a good use of their new test equipment.

New employees

Anastasiia Vinogradova is a new employee in our sales team since June.

Anastasiia is working with some of our other manufacturers, with testing equipment for sale only in the Nordic countries.

Anastasiia has a Master of Science in polymer engineering and graduated in 2006 at the Institute of Technology, Technical University of St. Petersburg, Russia.

Another new employee is **Stefan Liberg**, who works with mechanical design.

He has previous experience with product development and production equipment.

DKT 2018 in Nuremberg

In beginning of July it was time for the German Rubber Conference DKT in Nuremberg, Germany, again.

As usual, this was combined with a trade exhibition with about 300 exhibitors along the value chain of rubber and elastomers.

Elastocon was present in the stand of our German distributor company R. Hess MBV. We met customers from different part of the world, from our home market in Sweden to customers who travelled through Europe or other places in the world.

I had the opportunity to spend the day prior to exhibition in Nuremberg so I had some time to make a little sight seeing and this is an interesting city I would like to go back to again.
